

The power of nature, the power for the future.

By harnessing nature's inherent power,
we aim to create a safe, secure, and sustainable society.

Transform Challenges

We transform natural resources into valuable solutions that address environmental risks, safety, and quality, supporting a sustainable society.

Transform Structures

We transform the properties of materials, bringing out their potential and delivering new value to contribute to a better society.

Transform Functions

We transform nature's power into "reliability," unlocking the potential for new possibilities and building a better future.

In harmony with nature, we create
a sustainable future.

That is the SEA'S 7 Corporation promise.

SEA'S 7 is a solutions provider that harnesses the power of nature to resolve on-site challenges and support enterprise safety, the environment, and sustainability.

Cleanliness requires infrastructure that does not stop the factory.

SEA'S7 is a solution that transforms the risk structure itself in factory operations.

In factories, soiling is an unavoidable issue. However, conventional cleaning has involved various risks—quality defects, safety issues, equipment failures, production instability—making it necessary to take on new risks such as solvents, VOCs, odors, flammability, and glove-related issues.

While maintaining high cleaning performance, SEA'S7 continuously improves on-site safety, environmental quality, and sustainability.

SEA'S7 is not a “detergent”—it is a solution that transforms the risk structure of factory operations.

The accumulation of soiling leads to various risks.

Quality defects and claims

Equipment shutdowns

Accidents and fire risks

Deterioration of the work environment

Increased costs and reduced profitability

Therefore, we help protect the future of factories every day.

The core value SEA'S7 provides

Improved Safety

- Reduced risk of pulling and entanglement
- Reduced risk of chemical exposure
- Reduced fire and explosion risk
- Safer working environment

Addressing Labor Shortages

- Reduced burden from odor and solvents
- Reduced work burden
- Easier cleaning and setup
- Reduced hiring and training costs

Improved Equipment Safety and Productivity

- Extended equipment life
- Reduced breakdowns and stoppages
- Reduced cleaning frequency
- Reduced maintenance time and costs

ESG / GX / SDGs Compliance

- Reduced VOC emissions and environmental load
- Improved sustainability in the supply chain
- Contributing to sustainable manufacturing
- Strengthening SDGs story

Reduced Dependency on Hazardous Substances

- Substitute for hazardous substances
- Reduced risk of solvents
- Compliance with BCP (Business Continuity Plan)
- Ensuring legal and regulatory compliance

Cost and Efficiency Improvement

- Reduced waste, equipment, and labor costs
- Improved operational efficiency
- Reduced downtime and rework
- Increased productivity and profitability

SEA'S7 Position

We deliver not just “washing” products, but **sustainable factory operations** that contribute to on-site solutions.

Supporting quality, safety, the environment, and people—strengthening corporate competitiveness and building the future together.
